

A PET scan study for Parkinson's disease

 **Location:** Perceptive, 60 Temple Street, 8th Floor, New Haven, CT

- **Who is conducting this study?**

This study is being conducted by Perceptive (dba Invicro), a clinical research group in New Haven, CT. Funding for this study is provided by Merck.

- **What is the purpose of this study?**

To test a new investigational brain imaging agent using two types of PET scans in people with PD and in healthy volunteers. These investigational imaging agents hope to visualize the underlying disease in PD, a protein called α -synuclein.

- **Who can join this study?**

- Age 40–80
- Diagnosed with PD for 3+ years
- Able to undergo MRI (45 mins) & PET (up to 120 mins) with blood sampling

- **How long will the study last?**

Up to 90 days, with:

- Screening Visit with MRI scan (3–4 hours and may occur over more than one day)
- 2 PET Scan Visits (each 2–4 hours per visit)
- 2 safety follow-up telephone calls
- Optional Imaging Scan or Skin Biopsy

- **Will I be compensated for my time?**

If you are participating in the study, you will be eligible to receive a stipend up to \$2,500 to help cover your time and travel costs.
